

SECURE YOUR WEB SITES FROM MALWARE, ELIMINATE VULNERABILITIES & INCREASE SALES

Qualys SECURE Seal is a new service that allows businesses of all sizes to scan their web sites for the presence of malware, network and web application vulnerabilities, as well as SSL certificate validation. Once a web site passes these four comprehensive security scans, the Qualys

SECURE Seal service generates a seal for the merchant to display on their web site demonstrating to online customers that the company is maintaining a rigorous and proactive security program.

Leveraging QualysGuard's award winning scanning technology, Qualys SECURE Seal is the only web site security testing service that extends the ability to scan web site(s) for malware, network and web application vulnerabilities, as well as validating the web site's SSL certificate.

Qualys SECURE Seal: What It Does

Qualys SECURE Seal takes a 4 pronged approach to determine whether a web site is properly secured:

Network (Perimeter) Vulnerability Scanning – Identifies externally facing vulnerabilities on the web server that allow attackers to access specific information stored on the host.

Web Application Vulnerability Scanning – Scans for vulnerabilities in dynamic web applications, such as SQL Injection, to ensure consumers interact with web sites that safeguard their personal information.

Malware Detection – Evaluates the site for malicious software the web site could unintentionally infect visitors with.

SSL Certificate Validation – Validates the web site's SSL certificate is valid and current.

“Companies must also highlight security as an integrated feature of their services in order to address the emotional issues around lost confidence and trust. Thus, smart companies will aggressively pursue and promote new technologies that offer such consumer protections.”

*Rebuilding Consumers' Trust
In The Internet*
Forrester Research

Today, thousands of organizations including 40+ of the Fortune Global 100 rely on Qualys to identify their vulnerabilities and safeguard their networks and applications from threats and attacks. The Qualys SECURE Seal extends this trust to consumers, so they can feel safer when shopping online.

Qualys SECURE Seal Features:

Core Benefits and Features of Qualys SECURE Seal

- Comprehensive scan for Malware on externally facing web sites
- Leverage QualysGuard to identify your web application and network vulnerabilities
- Reporting that contains verified fixes for remediation
- All results in one place for faster remediation
- On demand scanning to verify if vulnerabilities have been remediated properly
- Demonstrates security posture to online shoppers
- Reduction in shopping cart abandonment
- Safeguard your brand by helping prevent data breaches

How it Works

The Qualys SECURE Seal is easy to install on any web site. Qualys SECURE Seal provides the merchant with an HTML snippet, which is easily added to the web site wanting to display the seal. Once the scans are performed and the merchant resolves all critical issues, the Qualys SECURE Seal will become visible to visitors of the merchant's web site.

When a critical vulnerability or malware is found, an email notification is sent to the merchant. The email directs the merchant to login to the Qualys SECURE Seal portal to review and fix the security issue(s) identified.

The Qualys SECURE Seal is only displayed by merchants who are proactive in remediating malware and critical vulnerabilities from their web site within the grace period. Qualys SECURE Seal allows merchants to verify their remediation efforts, by rescanning their web site at any time.

Pricing and Availability

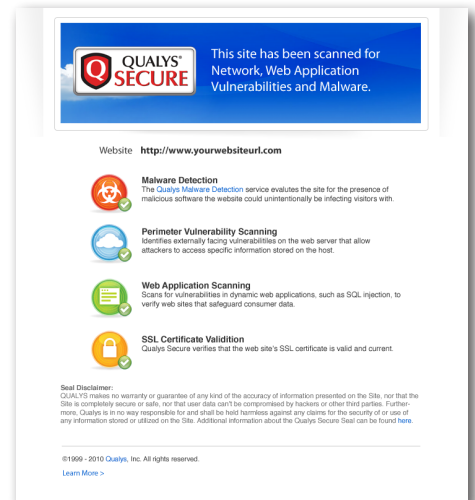

Qualys SECURE Seal subscriptions are sold annually starting at \$495 per year per web site. Sign up for a free trial at: <http://www.qualys.com/SEAL>
